

- **Getting Started with ForgeRock® Identity Cloud (FR-300)**

This course takes students from a high-level understanding of how ForgeRock® Identity Cloud (Identity Cloud) works, through the various online resources available to them, to a fully functional hands-on development environment, where they learn how to implement the many features of Identity Cloud in a training environment. Students take real-world use cases and implement them in a provided live Identity Cloud environment, where they learn the concepts and tasks necessary to successfully manage identities, applications, and user journeys in their own Identity Cloud.
